ENT 22 Jan 44--Has had some nasal obstruction and discharge since childhood. O/E Moderate crusting throughout both nasal cavities, over the middle terminates and in right ophenoethmoid region. Airway good. This condition resembles an early atrophic rhinitis though it might be caused by a low grade ethemoidal infection. be infected or to contain blood. The F.B. is behind the 3rd & 4th inter space. The posterior wound shows apparent complete destruction of the sphincter posteriorly but the wound is clean and drainage is adequate. To commence sulphathiazole course.

Jan 28--X-ray following aspiration showed the level of fluid in his chest to be much less. A transfusion of matched blood was given today at 4 P.M. followed by a rigor from which he had recovered. At 2000 hrs his pulse became worse and shortly afterwards he lost consciousness. His pupils were widely dilated and his reflexes generally were absent. Babinscki was negative. We feel that he developed a mestatasis to his brain. His condition is very grave.

28 Jan 44--2235 hrs. Patient pronounced dead.

~~Recommendation:~~ Deceased.
